First Peoples: Archaeology at Meadowcroft Rockshelter

A School Programs Guide for Educators

This program is made possible through the generous support of the Claude Worthington Benedum Foundation.
This project is made possible through the generous support of the Claude Worthington Benedum Foundation.

"From its inception, the Meadowcroft/ Cross Creek project was a multi-disciplinary undertaking. The central goal or theme was, “the systematic acquisition, analysis and integration of all data bearing on the archaeology, history, paleoecology, geology, geomorphology, pedology, hydrology, climatology and floral and faunal succession of the entire Cross Creek drainage. Moreover, this data gathering, analysis, and interpretation was to be executed with as great a degree of precision and employing the most sophisticated methodologies of which any of the project staff were cognizant. Additionally, and to us critically, this research was carried out virtually without temporal or fiscal constraints. In short, the project was designed to epitomize so-called ‘state of the art’ data gathering and analytical methodologies and procedures."

From “An Introduction to the Meadowcroft/ Cross Creek Archaeological Project 1973-1982” in Meadowcroft: Collected Papers

About Meadowcroft Rockshelter and Historic Village

Meadowcroft Rockshelter and Historic Village, which operates in association with the Senator John Heinz History Center, is a National Historic Landmark located on 275 acres in Avella, PA. The site is an outdoor living-history museum that uses a combination of reconstructed historic structures, traditional museum exhibits, and outdoor interpretive areas to tell the story about life in Western Pennsylvania during the past 16,000 years.

Interpretive areas at Meadowcroft include the Meadowcroft Rockshelter, one of the oldest documented sites of human habitation in North America; a recreated 19th century village; a recreated 16th century Indian Village, and a recreated 18th century frontier trade post. On-site and virtual educational programs immerse students in a variety of disciplines through the lens of 16,000 years of life in the Upper Ohio Valley.

TO VISIT:

Please visit Educational Programs at Meadowcroft for information about School programming.

TO VIEW:

The following video provides an excellent overview of Meadowcroft’s interpretive areas: https://www.youtube.com/watch?v=w2vSS9cQmOI (Run time is 2:44).

TO EXPLORE:

Explore the Meadowcroft website for a short virtual exhibit about the Meadowcroft Rockshelter.
About First Peoples: Archaeology at Meadowcroft Rockshelter

First Peoples: Archaeology at Meadowcroft Rockshelter is an ongoing project of Meadowcroft Rockshelter and Historic Village. The program encompasses on-site and virtual educational experiences and resources designed to support interactive exploration of Meadowcroft Rockshelter. A basic premise of the program is that all visitors possess the innate ability to make observations which serve as the foundation for constructing meaning from the sites, objects, and natural and recreated environments at Meadowcroft.

The current program is the extension of a 2007 project funded by the Claude Worthington Benedum Foundation. This program resulted in archaeology curriculum for use in 4th-8th grade classrooms. Beginning in autumn 2014, Meadowcroft staff, guided by an Educator’s Advisory Team, reevaluated existing resources and created new on-site and virtual Meadowcroft Rockshelter school programs. These programs follow the multi-disciplinary approach of the Rockshelter excavation, focusing on geology, ecology, geography, and archaeology to help explain the cultural significance of the site.

At the core of the new thematic programming lies a series of five extreme resolution GigaPan images of the Rockshelter. Partners at Carnegie Mellon University’s CREATE Lab developed new technology platforms to overlay multimedia interest spots on the images. The interest spots include audio and video interviews with experts, animations, graphics, photographs and text that provide context as students or visitors interactively explore the Rockshelter using a computer. The resulting images support mediated, unmediated, and theme-based interactive explorations, encouraging students to begin to look with the eye of a scientist in a compelling visual mode that is accessible, responsive to individual interests and engaging.

For the first time, students who will visit, as well as those who cannot physically visit, have unprecedented access to the Meadowcroft Rockshelter excavation. Teachers can guide students through the GigaPan photographs, bolstering their own knowledge with essays and resources in the First Peoples Teacher Guides. A selection of standards-aligned activity suggestions offers additional opportunities for exploration. Armed with authentic resources and virtual access to the excavation, students can view the images, connect what they see with data from the site, and draw their own interpretations.
Intersection of Major Themes and Disciplines in *First Peoples* Programming

Meadowcroft Rockshelter can be used to discuss several themes that appear across academic standards for Pennsylvania, Ohio and West Virginia. In most cases, the themes draw from multiple disciplines. The approach of the *First Peoples: Archaeology at Meadowcroft Rockshelter* curriculum models the multi-disciplinary approach taken by the archaeologists who investigated Meadowcroft Rockshelter.

The table below summarizes the intersection of First Peoples themes with the major disciplines. Grade-appropriate activity suggestions are included in Teacher’s Guides for each thematic area.

<table>
<thead>
<tr>
<th>First Peoples Themes</th>
<th>Major Disciplines addressed in First Peoples</th>
</tr>
</thead>
<tbody>
<tr>
<td>Geology</td>
<td>Science, History, Environment and Ecology, Geography, Technology and Engineering</td>
</tr>
<tr>
<td></td>
<td>Natural stratigraphy explains the evolution of the Rockshelter over time. Physical features suggest how the landscape was created. Throughout 16,000 years, geology has served as the foundation for all human activity at the site. At the most basic, the rocks around Meadowcroft anchor all aspects of the landscape from which humans met their basic needs. The geologic processes that created the Cross Creek drainage impacted the flow of water throughout the watershed. The slope of the land and proximity to water dictate the ecology of the watershed. Topography influenced how prehistoric peoples moved through the landscape. In the 20th and 21st centuries, energy extraction resulted in drastic human alteration to the landscape. Lithic (stone) tools were the backbone of the Paleo- toolkit. Coal extraction in the 20th century and natural gas extraction today are major industries.</td>
</tr>
<tr>
<td>Geography and Ecology</td>
<td>The topography of the region dictated the movements of early peoples. All aspects of prehistoric life were dominated by climatic conditions and the availability of natural resources. The processes that created and changed the physical landscape are still at play today. The physical characteristics and natural characteristics of a landscape contribute to discussions of how people used and modified the land to meet their needs. The decreasing availability of natural resources and population explosions resulted in shifts from foraging to horticultural, then agricultural and Abundant natural resources provided materials for prehistoric tools. Adaptations to tools and techniques were influenced by the movement of peoples and the response to environmental conditions.</td>
</tr>
<tr>
<td></td>
<td>All prehistoric human activity at Meadowcroft Rockshelter was dictated by the topography of the region and availability of natural resources. The diverse ecology remained stable until the Historic Period.</td>
</tr>
<tr>
<td></td>
<td>The Cross Creek drainage displayed a stable, temperate ecology during the Pleistocene, despite being only 80 miles south of the glacial advances. The diverse ecology remained stable until the Historic Period.</td>
</tr>
</tbody>

Page 5 of 30
First Peoples: Archaeology at Meadowcroft Rockshelter
School Programs Guide
| **Archaeology** | Although often grouped with social sciences, archaeology uses scientific methodology and procedures to understand the lives of humans in the past. Attrition of the sandstone cliff and deposition of sediments created the stratigraphy of Meadowcroft Rockshelter (geology). Radiocarbon assay was used to scientifically date cultural evidence at the site. | The purpose of archaeological investigation is to reveal patterns about human culture over periods of time. Geofacts and ecofacts contribute evidence to the study of archaeology, particularly regarding the availability of natural resources and human response to environmental conditions. | Geography contributes evidence about the movement of humans through the landscape, resource distribution, human characteristics of the landscape, and the interactions between people and the environment. | Archaeological evidence and stratigraphy can be used to demonstrate how prehistoric technologies and practices changed over time at Meadowcroft. Field Schools at Meadowcroft in the 1970s utilized early computer technologies in the systematic organization of data during the excavation. |
| **Cultural Findings** | Eleven naturally occurring strata (geology) and 52 Radiocarbon assays indicate a continuous human presence at Meadowcroft over 16,000 years. | All known New-World cultural periods are represented at Meadowcroft. Archaeological evidence explains how these cultures changed over time and the significance of these changes. The abundant natural resources and a relatively stable climate resulted in continuous but intermittent human use of Meadowcroft over 16,000 years. Prehistoric peoples adapted to minor climatic episodes and modified their activity at the site based on the seasons. Throughout 16,000 years, humans have modified the Cross Creek watershed to meet their evolving needs and in response to changing environments. | Prehistoric people adapted new technologies and practices in response to natural and cultural evolution. |
First Peoples: Archaeology at Meadowcroft Rockshelter On-Site Program

**Program at a Glance**

**Audience:** K-12th grade

**Duration:** 1.5-2 hours

2 to 4 interpretive stations

**Group Size:** 4 groups of up to 40 students per group
(Accommodations for larger groups are available by adding a visit to the Woodland Encounters area)

The program takes place outside. Please dress accordingly.

The Meadowcroft Rockshelter is located at the top of a steep slope. Access is gained by climbing 65 stairs to the lower viewing platform. There is no handicap access. However, the program can be altered to accommodate visitors with physical and other disabilities. Please inform Museum Staff of your group’s needs when making your reservation.

Explore the discovery and **excavation** of Meadowcroft Rockshelter, a National Historic Landmark, in this newly designed field trip experience. Interactive stations provide students with hands-on and inquiry-based opportunities for uncovering the secrets of the “First Peoples” and the **multi-disciplinary** approach of the experts who study the **archaeological** site. Investigate how **geography** and **ecology** of the Cross Creek watershed impacted the ability of **prehistoric** people to camp here, explore the geologic forces that created the Rockshelter and its **stratigraphy**, examine the **archaeological** site, and analyze educational **artifacts** to understand how **archaeologists** interpret a cultural **assemblage**.

**Program Themes**

A First Peoples Program uses two to four major themes to explore the Meadowcroft Rockshelter. Each theme focuses on a different **methodology** used by the multi-disciplinary team of experts who directed the archaeological investigations. Current themes include:

- **Geography and Ecology:** students explore the **geography** and **ecology** of the Cross Creek watershed to learn about how the natural world contributes to human settlement patterns, such as the bivouac (or camp) at Meadowcroft Rockshelter

- **Archaeology:** students explore the tools and techniques used to excavate, document, and interpret Meadowcroft Rockshelter, focusing on **stratigraphy** and site documentation

- **Geology:** students investigate the geological story of the Cross Creek watershed and the formation of Meadowcroft Rockshelter

- **Cultural Findings:** students participate in hands-on activities demonstrating material **culture** analysis and classification tools used by **archaeologists** to understand cultural changes over time.
Themes are selected for school field trips based on the grade level of students and the amount of time available for the experience.

Meadowcroft programs are facilitated by professional historic interpreters assisted by trained volunteers. Interpreters use an inquiry-based interpretive approach tailored to the grade-level and interest of their audience. When appropriate, interpreters present evidence from the excavation of the site and lead students through activities that apply the scientific method. Together, students and their interpreter formulate hypotheses, explore the procedures used to acquire data, analyze data from the excavation, and then draw conclusions based on their hypotheses. By the end of the program, students should be able to draw their own conclusions about the significance of the site while describing the processes and data which support those conclusions.

**Intended Outcomes of Thematic On-Site Exploration**

Students who participate in a First People: Archaeology at Meadowcroft Rockshelter program will demonstrate grade-appropriate understanding of the site in the following ways:

<table>
<thead>
<tr>
<th><strong>Geology</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Students will:</td>
</tr>
<tr>
<td>• Identify and describe geologic events that shaped the landscape of the Upper Ohio Valley</td>
</tr>
<tr>
<td>• Describe and explain the geologic forces that shaped the topography of the Cross Creek watershed</td>
</tr>
<tr>
<td>• Identify and describe critical evidence used by geologists to reconstruct the geologic story of the Cross Creek watershed/Upper Ohio watershed</td>
</tr>
<tr>
<td>• Identify key rock formations, the composition of those rocks, and their ages at Meadowcroft Rockshelter</td>
</tr>
<tr>
<td>• Describe and explain the life cycle of Meadowcroft Rockshelter</td>
</tr>
<tr>
<td>• Describe and explain how attrition and deposition contribute to the stratigraphy of the Rockshelter</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Geography, Environment, and Ecology</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Students will:</td>
</tr>
<tr>
<td>• Identify, describe, or explain Meadowcroft’s geographic location and different mapping representations that can be used to explain the site</td>
</tr>
<tr>
<td>• Identify and describe human and natural characteristics of the Cross Creek watershed</td>
</tr>
</tbody>
</table>
• Identify, describe or explain the major ecosystems of the Cross Creek watershed and the biotic and abiotic components of each

• Identify, describe, classify, or analyze the major categories of flora and fauna and the habitats of those organisms in the Cross Creek watershed

• Describe or explain how a stable, temperate ecology resulted in diverse natural resources throughout 16,000 years

• Identify, describe, explain or analyze the availability of natural resources and the human interaction with the environment near the Rockshelter over 16,000 years

• Identify, describe, explain, or analyze the transformations in the ecology and geography of the Cross Creek watershed due to increased human activity in the Historic Period

• Identify, describe, explain, or analyze how the Cross Creek watershed impacts geographic features, cultural behaviors and adaptation, and resource distribution.

---

**Archaeology**

Students will:

• Identify key features of an archaeological site

• Describe how archaeologists organized and excavated the site to preserve the context of all information

• Define multi-disciplinary and/or give examples of the diverse disciplines that contributed to the Meadowcroft Project

• Explain stratigraphy of Meadowcroft Rockshelter and/or apply the Law of Superposition to demonstrate relative dating

• Differentiate between and artifact and an anthropogenic feature; give an example of each

• Identify major categories of archaeological evidence

• Describe and explain the recovery, classification, and analysis of critical evidence recovered from Meadowcroft Rockshelter

• Describe or explain how archaeology contributes to the understanding of prehistoric peoples

• Identify, describe, or explain the difference between relative and scientific dating; give examples of each
• Recognize Meadowcroft Rockshelter as the most significant prehistoric archaeological site in Pennsylvania/ the Upper Ohio Valley

### Cultural Findings

Students will:

- Recognize that archaeology provides a process for learning about prehistoric cultural groups; evidence from archaeological excavations is analyzed and used to construct interpretations of prehistoric life

- Describe the stratigraphy of Meadowcroft Rockshelter and identify critical cultural evidence for each stratum

- Identify, describe and explain the different cultural groups who occupied Meadowcroft

- Explain how archaeologists use stratigraphy and diagnostic artifacts to differentiate between Cultural Periods at Meadowcroft

- Identify, describe or explain the major categories of artifacts recovered from a prehistoric archaeological site

- Identify, describe, explain and/or give examples of how continuity and change can appear in the artifact record

- Describe the Miller Complex and explain why the materials in Stratum IIa lower upset archaeological theories

- Describe and explain how archaeology at Meadowcroft contributed to a re-thinking of the Clovis First Theory

In addition to the anticipated outcomes for each theme, students will have the opportunity to practice the following reading, writing, speaking, listening and language strategies:

- Ask relevant questions
- Evaluate a variety of sources across a range of disciplines
- Demonstrate command of relevant vocabulary
- Articulate their own ideas
- Comprehend critical information about the theme and cite evidence that supports the theme
- Listen actively to a presenter; collaborate with classmates and museum staff
- Summarize key points
- Make and share observations about the site
- Experience sensory stimulation from the outdoor environment of the site
Preparing for an On-Site First Peoples Field Trip

On-Site Preparation Steps

1. Administer the appropriate Pre-Visit evaluation
2. Play the “Introduction to Meadowcroft” video OR present the Introduction to Meadowcroft Rockshelter PowerPoint
3. Conduct one of the First Peoples GigaPan activities
4. One day prior to your visit, offer an overview of the program, review logistics and review appropriate behavior and attire for the day.

Optional:
Select one of the thematic activities or create your own activity from the suggestions in the Thematic teacher guides.

Post-Visit
- Conduct a debriefing exercise or summary activity
- administer the Post-Visit Evaluation
- Provide feedback to Meadowcroft staff by e-mailing ardonovan@heinzhistorycenter.org

Schools planning to visit Meadowcroft Rockshelter during a field trip should allocate a minimum of one pre-visit and one-post visit classroom period for preparation and debriefing.

Students should have basic knowledge of the “sciences” of archaeology, geology, and ecology before visiting. They should also have working geographic knowledge of the area. First Peoples: Archaeology at Meadowcroft Rockshelter Resources can be used to prepare students for their visit.

Students should have attained at least an elementary understanding of the following general concepts/ vocabulary before visiting:
<table>
<thead>
<tr>
<th><strong>Vocabulary</strong></th>
<th><strong>Concepts</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Rockshelter</td>
<td>Basic Needs</td>
</tr>
<tr>
<td>Watershed</td>
<td>Ohio River Watershed</td>
</tr>
<tr>
<td>Archaeology</td>
<td>Geologic Forces</td>
</tr>

<tr>
<td>Environment</td>
<td></td>
</tr>
<tr>
<td>Culture</td>
<td></td>
</tr>
<tr>
<td>Erosion</td>
<td></td>
</tr>
<tr>
<td>Evidence</td>
<td></td>
</tr>
</tbody>
</table>
On-site Logistics

A visit to Meadowcroft is a unique experience that is similar to a visit to a National or State Park than to a museum. In advance of your visit, please prepare your students for the experience so that they are comfortable and ready to learn when they arrive.

Outdoor Museum

Meadowcroft Rockshelter is an outdoor site. Please advise students and chaperones to dress appropriately for the weather. Close-toed shoes are highly recommended. Sunscreen and insect repellent are desirable depending on conditions the day you visit.

For your safety and the safety of the buildings and grounds, please stay on the trails. Poison ivy and stinging nettle grow on the property. A variety of diverse birds, animals, insects, reptiles, and amphibians call Meadowcroft home. Please respect their habitats and look but do not feed or touch any creatures. Leave only your footprints.

The Meadowcroft grounds encompass over 200 acres and include both open and forested areas with varying slope and terrain. For safety and out of respect to other visitors, please walk between interpretive areas and share the trails.

Lunch Arrangements

Lunch space is available on a first-come, first-served basis. A picnic pavilion, outdoor picnic tables, and limited indoor seating are available. Lunch will be scheduled either before or after your program since students must be bussed to a remote portion of the museum for the First Peoples program.

Students will need to bring bagged lunches as the museum sells only snacks and drinks. Water fountains are available if students wish to bring their own reusable water bottles. Please remind students to clean up after themselves and place any garbage in appropriate receptacles.

Group Size and Distinction

Groups will be divided according to the number of interpretive stations planned for the day. You may wish to make this easier by pre-assigning students to a group. Some teachers find it easiest to have all the students in one group wear the same color t-shirt or nametag.
**Personal Technology**

Cameras and cell phones are permitted during all portions of the First Peoples program, with permission of the teacher/school. Please note that Meadowcroft is remotely located and that cell phone signal strength varies by carrier and location on the property. Please ensure that batteries are fully charged before visiting.

**Accessibility**

The First Peoples program occurs at the foot of the hill from the Meadowcroft Visitors Center. Interpretive stations are in the gravel lot at the Rockshelter and in the Rockshelter enclosure. The Rockshelter is located at the top of 65 stairs; rest areas are provided on the stairwell. Any student with special needs may be accompanied by an adult who can help them navigate the site and participate in programs. Any accessibility-related concerns may be addressed prior to your visit by contacting Meadowcroft Staff at 724-587-3412.

**Gift Shop**

A gift shop/bookstore is available onsite. Please let Meadowcroft staff know if you allow your students to visit the gift shop; we will assign each group a time on the schedule to minimize congestion in the space. If you will be shopping, please remind your students to bring money.

**Chaperones**

Chaperones are essential to the success of a field trip. However, a visit to Meadowcroft Rockshelter is unlike many field trips in that it bridges a traditional museum experience and an outdoor park-like atmosphere. Teachers should help prepare the chaperones for the visit, communicating expectations and basic safety information prior to your arrival on site. Use the chaperone guide on the following page to prepare your chaperones. Feel free to customize the guide with your own expectations or notes.
Chaperone Guide to Meadowcroft Rockshelter

About Our Field Trip:
Our students will be participating in a First Peoples: Archaeology at Meadowcroft Rockshelter program. Students will be visiting the Meadowcroft Rockshelter, a prehistoric archaeological site, to learn about the process of archaeology, geology, the geography and ecology of the Cross Creek watershed, and the cultural evidence recovered by archaeologists. You can learn about the program by visiting Meadowcroft’s website (http://www.heinzhistorycenter.org/meadowcroft).

Attire:
The program takes place outside; please dress accordingly. Close-toed shoes are highly suggested. Please remember that you are representing our school district when you choose your attire.

Groups:
Our students will be divided into groups for the duration of the Rockshelter program. You will be assigned to one group; please stay with that group at all times. Each group will have a unique schedule that allows them to experience all the interpretive stations at the Rockshelter. Please make sure your group follows the schedule.

Safety:
The program requires students to be bussed from the Visitor Center to a remote location on the site’s property. Once at the Rockshelter, students will be near a deep and swift creek, rocky terrain, and a forest environment. Groups will need to climb a steep staircase (65 stairs) to access the Rockshelter site; landings and rest points are built in to the climb. Please make sure your group stays safe:

- Stay on marked trails and pathways
- Do not sit or climb on the fences, walls or barricades
- Walk; no running or horseplay
- Look at but do not feed, touch or approach any wild creatures you may encounter
- Stay to your right when using the stairs to the Rockshelter; groups will be passing one another when moving between interpretive stations.

Lunches:
Lunch space is available on a first-come, first-served basis. Museum staff will assign us a lunch time. The museum only sells snacks and beverages; please bring a lunch with you. Water fountains are available if you wish to bring a refillable water bottle.

Personal Technology:
We will be following our school’s technology policy during the field trip. Please model appropriate behavior and mute your phone and only use it to take pictures. Note that Meadowcroft is remotely located and that cell phone signal strength varies by carrier and location on the property. Please ensure that batteries are fully charged before visiting.
First Peoples Virtual School Programs

Meadowcroft offers two different opportunities for virtual programming: facilitated videoconferencing or teacher-led virtual field trips. Both programs use the First Peoples: Archaeology at Meadowcroft Rockshelter resources and GigaPan images, offering students who cannot physically visit the site an unprecedented opportunity to investigate Meadowcroft Rockshelter.

Videoconferencing

Classrooms can engage in collaborative, interactive learning experiences with Meadowcroft staff from remote locations using videoconferencing technology. A designated member of the Meadowcroft Education staff will be assigned to facilitate all aspects of your program. These programs follow a general thematic outline; however, staff members will work with you (beginning up to six weeks in advance of your program) to tailor the program to your class.

During the videoconference, the facilitator will use a combination of distance learning techniques to engage your classroom, including presentation, discussion, question-and-answer, cooperative problem-solving, and reflection. The techniques require students to practice various reading, writing, speaking, listening, and language standards. Students will engage with a variety of data from the intensive study of the Rockshelter, high-resolution GigaPan images, and multi-media content.

Included in the fee for the videoconference, is a pre-visit phone call with the teacher to customize the experience, pre-visit materials which will be e-mailed a minimum of two weeks prior to the program, and a follow-up call or e-mail. Most programs require the teacher to have students write and submit questions in advance of your program date.

Videoconference Themes and Outcomes

Teachers can choose from five thematic videoconferencing explorations, including:

1) Meadowcroft Rockshelter Overview: Explore the secrets of Meadowcroft Rockshelter and the significance of the site in North American archaeology.

For more information on the programs, contact Andrew Donovan, Program Coordinator, at ardonovan@heinzhistorycenter.org or (724)587-3412.
Anticipated Student Outcomes:

- Identify Meadowcroft Rockshelter as one of the oldest, most continually (although intermittently) occupied archaeological sites in North America, containing evidence of all major prehistoric Cultural Periods
- Explain the state-of-the-art multi-disciplinary archaeological investigation
- Describe critical evidence recovered from the site, including artifacts, features, geofacts, and ecofacts
- Explain how a stable, temperate ecology resulted in diverse natural resources throughout 16,000 years

2) **Archaeology at Meadowcroft Rockshelter:** Investigate the methodologies used by the experts who excavated the Rockshelter and explore the evidence left by the First Peoples.

Anticipated Student Outcomes:

- Describe how archaeologists organized and excavated the site to preserve the context of all information
- Define multi-disciplinary and give examples of the diverse disciplines that contributed to the Meadowcroft Project
- Explain stratigraphy of Meadowcroft Rockshelter and apply the Law of Superposition to demonstrate relative dating
- Describe and explain the recovery, classification, and analysis of critical evidence recovered from Meadowcroft Rockshelter

3) **Cross Creek Ecology:** Explore the geography and ecology of the Cross Creek watershed to determine how the natural world impacted the lives of the First Peoples.

Anticipated Student Outcomes:

- Describe the location of Meadowcroft Rockshelter on various geographic representations
- Explain the major ecosystems of the Cross Creek watershed
- Explain major categories of flora and fauna and the habitats of those organisms in the Cross Creek watershed
- Explain how a stable, temperate ecology resulted in diverse natural resources throughout 16,000 years

4) **A Geologic History of the Meadowcroft Rockshelter:** Discover the geologic forces that shaped the Cross Creek watershed, created the Rockshelter, and impacted the subsequent stratigraphy of the site.

Anticipated Student Outcomes:

- Describe and explain the geologic events/forces that created the landscape of the Upper Ohio Valley, including erosion, downcutting, etc.
- Identify and Describe critical evidence used by geologists to reconstruct the geologic story of the Cross Creek watershed
- Describe and explain the life cycle of Meadowcroft Rockshelter
- Explain how attrition and deposition contribute to the stratigraphy of the Rockshelter
5) The Cultural Significance of the Meadowcroft Rockshelter: Uncover cultural evidence from Meadowcroft Rockshelter to understand the cultural progression of First Peoples in North America.

Anticipated Student Outcomes:

- Describe the stratigraphy of Meadowcroft Rockshelter and identify critical cultural evidence for each stratum
- Explain how archaeologists use stratigraphy and diagnostic artifacts to differentiate between Cultural Periods at Meadowcroft.
- Describe the Miller Complex and explain why the materials in Stratum IIa lower upset archaeological theories
- Describe and explain how archaeology at Meadowcroft contributed to a re-thinking of the Clovis First Theory

In addition to outcomes for each theme, students will have the opportunity to practice the following reading, writing, speaking, listening and language strategies:

- Write and ask relevant questions
- Evaluate a variety of sources across a range of disciplines
- Demonstrate command of relevant vocabulary
- Articulate their own ideas
- Comprehend critical information about the theme and cite evidence that supports the theme
- Listen actively to a presenter
- Summarize key points
- Describe the strengths and limitations of participating in a field exploration using videoconferencing technology

Preparing for Videoconferencing First Peoples Learning Experiences

Videoconferencing Programs are currently available November-March when Meadowcroft is not physically open to the public. Please contact staff a minimum of six weeks before your preferred program.

First Peoples: Archaeology at Meadowcroft Rockshelter Videoconferencing programs are designed as a collaborative endeavor between Meadowcroft staff and classroom teachers. Please be prepared to offer input during the planning process. The following table offers a summary timeline for planning and implementing your customized videoconference. Please note that the teacher is responsible for supplying information and/or leading a few activities before your program.

The table on the following page offers an approximate timeline for preparing for a First Peoples videoconference.
<table>
<thead>
<tr>
<th>Timeframe</th>
<th>Task</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Six Weeks prior to preferred program date (minimum)</td>
<td>Contact Meadowcroft Staff to schedule program.</td>
<td>Meadowcroft staff will e-mail or call in response to your online or phone reservation.</td>
</tr>
<tr>
<td>One month prior to program</td>
<td>Correspond with Meadowcroft staff to tailor content and discuss preferred objectives.</td>
<td>Meadowcroft staff will call you a minimum of 30 days before your program to tailor content and discuss your objectives. Please schedule approximately 20 minutes for this call. This will be followed by a confirmation e-mail containing an outline for your program and any pre-visit activities/materials.</td>
</tr>
<tr>
<td>Two weeks prior to program</td>
<td>Introduce Meadowcroft to your students and administer the pre-program evaluation.</td>
<td>A pre- and post- evaluation (identical) offers you an opportunity to gauge student learning.</td>
</tr>
<tr>
<td></td>
<td>Complete any pre-visit classroom activities, have students write questions they hope to have answered.</td>
<td>E-mail Meadowcroft Staff</td>
</tr>
<tr>
<td></td>
<td>Share pre-program preparations and class profile with Meadowcroft Staff</td>
<td></td>
</tr>
<tr>
<td>One week out</td>
<td>Participate in the tech run</td>
<td>This is a five (5) minute tech run to make sure there are no connectivity issues.</td>
</tr>
<tr>
<td></td>
<td>Remind students that they will be participating in a Videoconference next week</td>
<td>Review protocol and expectations</td>
</tr>
<tr>
<td>Day Before</td>
<td>Remind students that tomorrow is the videoconference.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Prepare classroom and any materials that your Staff facilitator has suggested</td>
<td></td>
</tr>
<tr>
<td>Day of</td>
<td>Help facilitate student participation during program</td>
<td>Please engage with Meadowcroft Staff and model appropriate behavior for your students.</td>
</tr>
<tr>
<td>Post-program</td>
<td>Administer post-program student evaluation</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Complete a post-program activity</td>
<td>E-mail Meadowcroft Staff with any follow-up questions or “shareable” moments”</td>
</tr>
<tr>
<td></td>
<td>Complete a program evaluation</td>
<td>Mail or e-mail your feedback to Meadowcroft Staff</td>
</tr>

</table>
Virtual Field Trips of Meadowcroft Rockshelter

The *First Peoples: Archaeology at Meadowcroft Rockshelter* GigaPan images provide an engaging virtual field trip for students. The images are structured to enable self-guided virtual field trips or for teacher-designed visits. The images contain embedded thematic “lessons”, complete with curated text, highlighted vocabulary terms, visual materials, and multimedia content. Tabs at the bottom of each image can be used to explore a theme, offering a numbered *sequence* of interest points. Alternately, students can randomly select interest points to explore the site as their own interests permit.

Teachers may also choose to develop their own virtual field trip by creating a worksheet that guides student exploration to the Meadowcroft Rockshelter. In this case, materials curriculum materials from the *First Peoples* resources will supplement the information embedded in the GigaPan images. If you develop a virtual field trip using *First Peoples: Archaeology at Meadowcroft Rockshelter*, please share your work with Meadowcroft Staff.

To conduct a virtual field trip, use the *First Peoples* GigaPan lessons.

Significance of Meadowcroft Rockshelter

Meadowcroft Rockshelter (36Wh297) is a deeply stratified, multi-component archaeological site situated on the north bank of Cross Creek, a small upland of the Ohio River. The site is located near Avella, Pennsylvania in Washington County. The excavation at Meadowcroft was conducted by the University of Pittsburgh beginning in the 1970s and yielded tremendous amounts of data, including well preserved plant, animal, and cultural remains.

Radiocarbon dates indicate that humans occupied the site at least 16,000 years ago, making the location one of the oldest cultural sites in North America. Due to exceptionally intact, deep stratigraphy (16 feet), Meadowcroft also yielded the most continuous record of prehistoric life in Pennsylvania, covering all major cultural periods from Paleo-Indian through the Historic Period.

The site is significant for two primary reasons:

- **Stratum IIa lower contains the most significant pre-Clovis Paleo-Indian artifacts in Pennsylvania, if not North America.** Radiocarbon dates from Stratum IIa indicate a human presence at least 5,000 years before Clovis Paleo-Indian sites. Lithic technologies from this level include stone blades that resemble stone tools found in Siberia dating to the same period. The Miller Lanceolate, named for the man who discovered Meadowcroft Rockshelter, is an unfluted projectile point that resembles later fluted points. This suggests that the earliest people at Meadowcroft were the ancestors of later Paleo-Indian groups. The appearance of this technology can also be used to support new claims to the peopling of North America.

- **The excavation at Meadowcroft Rockshelter is known in scientific communities for the thoroughness of the state-of-the-art, interdisciplinary archaeological investigation.** At Meadowcroft, a vast team of experts from thirty-two academic disciplines contributed the best practices for their specialties, resulting in a comprehensive gathering of data that enabled a virtual reconstruction of all aspects of life at prehistoric Meadowcroft. Although undertaken in the 1970s, the methodologies employed at the site are renowned throughout the archaeological community to this day.

The excavation team at Meadowcroft Rockshelter gathered an immense amount of data about the natural and cultural world. By preserving the context of each piece of data within the site’s stratigraphy, the scientists and archaeologists could create a chronology of what all aspects of life at

School Programs Guide
Meadowcroft looked like. Specifically, the earth scientists, botanists, biologists, and ecologists studied the natural world and changes to the **prehistoric environment**. The **archaeologists** and anthropologists used the data to recreate the cultural record. Working together, the two teams (natural sciences and cultural sciences) began to interpret the cultural response to the changing natural world. The data generated during the **excavation** continues to be researched today. Educators can benefit from the data and study by using Meadowcroft as a case study for how different academic disciplines work together to draw conclusions.

The summaries on the following pages identify the key content for the major themes addressed in *First Peoples: Meadowcroft Rockshelter*. Each summary offers links to the GigaPan images, Thematic Teacher’s Guides, and thematic GigaPan lessons that can be further investigated.
Meadowcroft is located on the unglaciated portion of the Appalachian or Allegheny Plateau, west of the valley and ridge province of the Appalachian Mountains, and northwest of the Appalachian Basin. The surface rocks of this region are layered sedimentary rocks of Middle to Upper Pennsylvania Age (Casselman Formation). The predominant lithologies are shale, quartz, sandstone, limestone, and coal in decreasing order of abundance.

Rockshelters form when softer bedrock erodes under a harder lithology. Meadowcroft Rockshelter is formed beneath a cliff of Morgantown-Connellsville sandstone, a hard, thick fluvial or channel sandstone within the Casselman Formation (Upper Conemaugh) of the Pennsylvania Period. The sandstone varies from a sub-grey wacke to protoquartzite in composition. It is an immature sandstone composed predominantly of quartz grains with minor amounts of mica, feldspar, and rock fragments. The rock underlying the Morgantown-Connellsville sandstone is a less resistant lithology, most likely shale. The Rockshelter formed when surface weathering and stream erosion from Cross Creek wore away at the softer lithology, cutting back into the hillside under the sandstone and forming a reentrant under the sandstone cliff. The sandstone then remained as a roof to the Rockshelter. By 21,000 years before the present, the Rockshelter was high and dry above the floodplain of Cross Creek and available for human occupation.

The ceiling of the Rockshelter is gradually migrating upward and cliff-ward as erosion occurs both on the Rockshelter ceiling and the cliff face. Within the face of the shelter excavation, the recession of the dripline representing the cliff edge position can be plainly seen. Most typically, erosion results in the dislodgment of individual sand grains. More rarely, rock fragments up to the size of a small house have fallen. This erosion, in addition to sheetwash from the contiguous upland areas, is responsible for the development of the stratigraphy of the archaeological site.

Meadowcroft Rockshelter is in northern Washington County, Pennsylvania, roughly 35 miles southwest of Pittsburgh and just over 2 miles from Avella, PA. The site is situated on the north bank of Cross Creek, a small tributary of the Ohio River, which lies roughly 7 miles to the west. The site is in the Pittsburgh Plateaus Section of the Appalachian Plateaus Physiographic Province.

Topographically, the region is maturely dissected. More than 50 percent of the area is in valley slopes with upland and valley bottom areas in the minority. The stream pattern is dendritic with drainage running northwestward to westward, crossing the state line into Brooke County, West Virginia and ultimately draining into the Ohio River near Follansbee, WV. This topography was generated during the Pleistocene when increased precipitation and runoff caused extensive downcutting.

Meadowcroft Rockshelter is oriented roughly east-west with a southern exposure, and stands approximately 50 feet above Cross Creek and 803.5 feet above sea level. The area protected by the extant sandstone overhang is ca. 213 square feet while the overhang itself is some 42.6 feet above the modern surface of the site. The shelter was available for human occupation by 21,000 years ago. In addition to the potential availability of water from Cross Creek, springs are abundant in the immediate vicinity of the shelter. The Cross Creek floodplain below, and bluff face and bluff top immediately around Meadowcroft Rockshelter, are currently covered with a mixed deciduous forest.

The ecology of the Cross Creek Valley remained relatively stable from the end of the Wisconsinan Glaciation 11,000 years ago until the Historic Period. At one time, forest covered all the watershed. Mixed oak forests dominated hill-tops and south-facing slopes, mixed Appalachian mesophytic forests on north-facing slopes and in headwater coves, and riverine forests on alluvial floodplains. Most of the area was cut in the early nineteenth-century when the land was first cleared and prepared for agriculture. Areas which are reforested have been repeatedly logged and represent secondary forests.
Faunal populations remained relatively stable from Pleistocene until the Historic Period. As late as the beginning of the eighteenth-century, elk, black bear, mountain lion, wild cat, timber wolf, fisher, otter, beaver, wild turkey and passenger pigeon could be found in the hills of western Pennsylvania. Today, white-tailed deer, cottontail rabbit, gray and fox squirrel, ringneck pheasant, bobwhite quail, ruffed grouse, muskrat and mink constitute the principle game species of the area. The ruffed grouse, wild turkey, and the introduced ringneck pheasant comprise the game birds of the area. Terrestrial and riverine reptiles are represented by black snake, garter snake, box turtle and snapping turtle. Amphibians include various salamanders, toads, tree frogs and bull frogs.

Throughout the glacial advances, which came within 80 miles of Meadowcroft Rockshelter, the Cross Creek Valley retained a temperate, Carolinian environment. The climate of the area is characterized by a wide seasonal temperature range with a moderate amount of precipitation falling primarily during the warm parts of the year. In Washington County, PA, the yearly temperatures range from -20°F during the winter months to 90°F in July and August. The temperatures tend to be lower in hilly areas than in more level parts of the county, with nighttime temperatures dropping colder than daytime. Meanwhile, daytime temperatures are generally higher in valley bottoms than on hilltops. Approximately 22 inches of rain fall during the 150 frost-free growing season days, with an average total of 40 inches of rain falling annually.

Archaeology at Meadowcroft Rockshelter

Archaeological excavations were conducted at Meadowcroft Rockshelter under the direction of Dr. James Adovasio, then of the Department of Anthropology at the University of Pittsburgh, from 1973 to 1979 (6 field seasons, 417 excavation days of 12 to 14 hours). Dr. Adovasio later led additional work during the 1990s as director of the Mercyhurst Archaeological Institute, Mercyhurst College. This work consisted of site maintenance to clean up slumps in the shelter. No new archaeological excavation work has been undertaken since this period.

From the start of the project, the excavation was designed as a multi-disciplinary investigation to gather as much data as possible about the site and surrounding area. Every step of the process was planned and documented to preserve the context of any recovered data. Context is the three-dimensional location of an artifact or feature in relation to all the other artifacts, features, geofacts, or ecofacts around it, including soil. Archaeology is a destructive science: the process destroys the context of the evidence. Great care is necessary to ensure that all information is recorded accurately since there are no second chances. The data gathered during the archaeological investigation yielded geological, ecological, and anthropological information.

Eleven well-defined stratigraphic units were isolated at the site and meticulously excavated using the best stratigraphic methodology available at the time. In fact, the excavations are still widely considered to be state-of-the-art. The strata were numbered from Stratum I, the oldest and deepest unit, to Stratum XI, the uppermost and youngest. Fifty-four radiocarbon assays have been run on samples from Meadowcroft, firmly dating the eleven strata and various occupations of the Rockshelter.

Excavations at Meadowcroft ended after 1979, at which time approximately three-quarters of the area under the dripline had been excavated. It was decided after the 1979
field school to preserve unexcavated deposits for future work when newer methodologies and technologies might yield significant new data. Since then, only maintenance work has been conducted on site. There remain significant deposits of all eleven defined strata that could be excavated using newer methodologies and techniques to address new research questions and extract information and data not recovered by excavations conducted during the 1970s.

To conduct a lesson, download the Archaeology Exploration.
Meadowcroft Rockshelter’s significance lies with the **stratigraphy** of the site: hidden within the eleven natural strata is a continuous but intermittent record of cultural activity. Applying the **Law of Superposition**, archaeologists safely assume that any **cultural evidence** is where it was deposited by **prehistoric** peoples, with the oldest **evidence** being deepest and the newest on top.

Fifty-two **radiocarbon dates** anchor the stratigraphic **sequence**. The calibrated ages for these assays indicate a **Woodland period** ascription for Strata XI-IV (upper), an **Archaic** ascription for Strata IV (middle)-IIB, and a predominately **Paleo-Indian** ascription for Stratum IIA. In short, the calibrated dates from Meadowcroft support a complete **sequence** of every major **prehistoric** cultural period in North America, including major cultural transitions such as crop domestication.

Prior to the **excavation** of Meadowcroft Rockshelter, the accepted “First Peoples” were the Paleo-Indian Clovis **cultures**, named for a set of distinctive stone tools associated with Pleistocene **fauna** discovered near Clovis, New Mexico, and radiocarbon dated between 11,500 and 11,000 YBP. However, in Stratum IIA at Meadowcroft, **archaeologists** encountered **ecological** data and cultural materials dubbed the “Miller Complex” (including **basketry**, a modified wood spear foreshaft, a notable **lithic assemblage**) that were stratigraphically below Paleo-Indian cultural materials that were radiocarbon dated to the same time as Clovis. These materials have been radiocarbon dated between 16,175 and 11,300 years ago, registering a cultural presence at least 4,000 years before Clovis. On top of that, the **lithic context** of the so-called Miller Complex looked very different than Clovis **assemblages**. These Pre-Clovis Paleo-Indian finds are the most significant cultural materials at Meadowcroft.
Meadowcroft was the first **archaeological** site to publish Pre-Clovis materials, giving rise to new theories about how and when North America was peopled. The fact that there remains a substantial unexcavated portion of early and later levels means the site has the potential for others to test the existing interpretations of the site and to yield even more data on the early inhabitants of the United States. Since publication of Meadowcroft’s Pre-Clovis component in the 1970s, other sites using similar **methodologies** have reported similar findings in **artifacts**, **stratigraphy**, and **radiocarbon assays**. Together these sites demonstrate that **prehistoric** people were active in North American **at minimum** 5,000 years before Clovis peoples. Meadowcroft Rockshelter remains a critical piece of **evidence** in the understanding of these first peoples.
